About me

I'm more than just a developer—I'm a builder of complete solutions. I thrive on challenges, adapt quickly, and take full ownership from idea to deployment.

Work Experience

Visionary iGaming, Technical Support Agent

Oct 2024 - Currently

- Responsible for the maintenance and repair of equipment, managing tickets, and addressing assigned cases. Provide hardware and software support, including troubleshooting, installation, and updates. Handle tasks related to cabling, physical connections, and logical network setups, ensuring optimal system performance and connectivity.

INTRA Seguridad Electrónica, Web Developer (Freelancer)

Jan 2025 to Jul 2025

- As a freelancer, I led the end-to-end development of the INTRA web system, working on both frontend and backend using Laravel, React, and MySQL. I was responsible for project planning, UI design in Figma, database modeling, server setup, and the implementation of key modules such as inventory management, technical reports with signatures, component and task assignment, role-based access control, PDF generation, and automated email notifications. The system featured real-time validations, dynamic forms, and full resource traceability. I maintained close communication with the client through regular meetings, continuously adapting the system based on feedback. The greatest challenge was handling the project independently—from scratch to final deployment.

Grupo Bimbo, Internship

Oct 2023 to Dec 2023

- I developed multiple internal tools using Microsoft Power Platform to improve HR and Facilities operations. I created a system to manage job applications, replacing Excel-based processes, and another for incident reporting within facilities, enabling evidence attachment and status tracking. Additionally, I automated departmental Excel tasks using Python and Pandas. Adapting to new technologies was a challenge that I overcame with a proactive mindset and eagerness to learn.

Education

Cybersecurity Engineering, Universidad Fidélitas

2024 - Currently

Mid-Level Technician in Software Development, Colegio Vocacional de Artes y Oficios (COVAO)

2021 - 2023
